

Eliminate Unwanted Voice Traffic

Mutare Voice Spam Filter eliminates unwanted calls at the network edge.

Mutare Voice Spam Filter™

An Enterprise Solution

The Mutare Voice Spam Filter guards your voice network by filtering incoming calls, allowing legitimate business calls through while blocking spam callers. Unlike some spam solutions that ring your phone and interrupt your workflow, the Voice Spam Filter is designed to divert spam calls without ever ringing your phone. Because voice calls are the life blood of business, the feature was designed to “do no harm,” stepping out of the call path in the event of a failure and never “listening” into the call medium. The filter simply looks at the call signal data ensuring call integrity and security.

We Play Nice with Others

Our solutions are built to work with a broad spectrum of voice / network technology providers.

Immediate & Significant Impact

When you get rid of unwanted voice traffic, your organization will experience an immediate and significant improvement in overall network performance, a reduction in potential cyber risk posture and an improvement in team member productivity.

Remove, delete, vaporize unwanted calls so they don't come into your network.

How it Works...
we use SIP to stop unwanted traffic from entering your voice network

The Voice Spam Filter relies on modern Session Initiation Protocol (SIP) digital communication. It examines the signaling information transmitted with the SIP call to identify the caller ID.

Within one second, the filter checks the caller ID against enterprise allowlists and blocklists, as well as dynamic robocall list(s) and, optionally, a spoof call detection system. Allowlisted calls are passed through. Blocklisted or suspect calls are diverted to a recording, filtered through the Mutare CAPTCHA, or simply disconnected based on rules set up by the system administrator. Call screening is typically completed in under a few hundred milliseconds, making the system completely transparent to callers and your employees.

Robust Interactive Dashboard
instantly understand your voice traffic

Our powerful dashboard provides instant clarity and insights into your voice network traffic. With simple clicks and toggles you can easily change time frames and discover how Unwanted Traffic is impacting your Network Performance and Security. This data-rich overview will enable you to identify patterns, trends and changes in your network traffic to optimize flow and performance.

Custom Tuning
for ongoing, better and better and better protection

Quickly and easily improve your protection by tuning your system with our Rules Manager. With a few clicks you can create enterprise-specific blocklists and allowlists. Your lists can be synchronized with external databases, updated via upload, or manually edited. The system logs all list activity and filter settings by admin, providing full traceability for troubleshooting.

Control at Your Fingertips
proactive management for administrators

PASSIVE LOGGING ONLY

Provides the ultimate "safety valve" to remove the filter from the call flow equation yet maintain call statistics.

PASSIVE ANALYZE MODE

Enables you to log and evaluate calls against the rules engine and, if enabled, an external spam filtering list(s) releases all calls. This mode can be useful in evaluating the performance of the spam filter before actual use.

ACTIVE ANALYZE MODE

Your most robust protection, filters incoming calls against the enterprise Rules Manager list and an external spam filtering list(s), and will take action to drop, route or allow flagged calls. Provides administrators the capability to proactively manage system behavior and adjust preferences.

Mutare Analytics

Data | Analytics Engine | Reporting

Remove Network Traffic by

12%

On Average, 12% of Total Voice Traffic is Unwanted Traffic.

Remove Cyber Threats by

34%

On Average, 34% of Unwanted Calls are potential cyber threats.

Improve Employee Productivity

23^{MIN}

Unwanted calls create up to 23 Minutes of unproductive time per incident.
